

# Joist Construction Setting Jig

Typical for all Scales  
Directions

After removing the jig strips from the carrier sheet place them over your joists in order to hold them vertical and with the right spacing. Use at least two seperated by 3" or so. If you have real long joists use additional jigs to hold your joist in place while you apply glue. Let the glue dry well before removing the jigs. If you have a wider area than 30 scale feet use additional joist jigs but catch the first few openings on existing joists as show in the photo.
